

# Litter at Whitecross

By: *Oliver*

Date: *Thursday 14 March 2019*

I have given out a survey about litter and whether it is a problem in Whitecross. From my results I can see that 13 of the 15 pupils say that litter is a problem in school and needs to change.

The two pupils that said it wasn't a problem also said that there's cleaners to clean up after, which is true but if we can look after ourselves then there wouldn't need to have cleaners to pick up after pupils and they can concentrate on other jobs that they need to do around the school.

However the people who said the litter is a problem in school also said that the school needs more bins because people are too lazy to get up and put their rubbish in the bin. One of the students said "Everywhere you go there is food and rubbish on the floor". Also, that the rubbish on the floor attracts unwanted pests like rats and seagulls. Rats may carry diseases which could make students very ill.

The litter that gets put in the bins could also get recycled to help the environment and make the world a better place. But also could be little things to help in school like the water bottles at lunch and break could be recycled into another one and save money. In conclusion, littering is a problem in Whitecross and needs to change otherwise it could become a disgusting school with lots of rats and students becoming very ill. Then outside seagulls everywhere scavenging for food and the school will become very horrible. Therefore we need to keep it clean and nice so people can learn.
